

GIL S3000

GIL S3000 handles banknote recognition and detection is based on state-of-the-CIS scanner and image processing technology.

Banknotes can be value by denomination and total amount physical orientation. Suspicious banknotes will be block and you can view a detailed counting report after the counting job.

The operation of the machine is very intuitive by a simple keyboard and a large color display. When performing batch counting, the batch value can be selected using preset standard values or you can input individual values by using the numerical keyboard.

GIL S3000 is high tech with many advanced functions, it still comes in a compact size which will fit all modern financial and retail sector environments.

High reliability, high quality and stylish, user-friendly design at an attractive price level are core characteristics of GIL S3000.
